Active Security Clearance

Education

University of Arizona (B.S. Electrical and Computer Engineering) Minor: Computer Science

Experience

Embedded Software Engineer Boeing June 2026 - Current

- Design, Implement, and Integrate C/C++/ADA code for the EA-3 AWACS on Legacy Codebase.
- Maintain Code on Communication Systems and Sensors on EA-3 AWACS (Link 11./ Link 16).
- Conduct and Support HWIL/SWIL simulations and testing Linux environment..
- Coordinate with Cross Functional Teams deploying systems in fielded environments and Labs.
- Integrate embedded software with hardware/Linux development, debugging, and build systems.

Senior Software Engineer Systems Intelligence March 2025 - June 2026

- Full Stack Development across multiple application developing, deploying, and running applications in containerized environments (Docker).
- Integrated feedback loops and control mechanisms via **RESTful APIs** and event-driven architectures, ensuring dynamic adaptability and real-time system updates.
- Developed responsive, modular front-end components in **React.js** and **TypeScript**, implementing complex data visualizations and interactive dashboards for real-time US Army insights
- Designed and deployed scalable data-driven applications within the Palantir Foundry ecosystem, leveraging ontology modeling, pipeline orchestration, and operational workflows to transform complex datasets into actionable insights for mission-critical decision-making

EW Software Engineer III/Embedded Software Engineer CymSTAR LLC April 2023 - March 2025

- Develop and maintain real-time simulation code and user interface modules in C++ within Linux and RTOS environments, ensuring high-performance and scalability.
- Constructed operational scenarios and system boundaries from the ConOps and converted them into testable functional and non-functional software requirements for Software Life Cycle Criteria.
- Integrated EW Functionality within the A-10 codebase which included ADA/C/C++

Aircraft Armament Team Chief USAF April 2009-Current (USAF Reservist)

- Lead and supervise aircraft armament operations for the F-35, directing maintenance, loading, inspection, and troubleshooting activities to ensure aircraft mission readiness and compliance with USAF technical orders and safety standards.
- Served as the primary technical advisor and quality assurance lead for armament-related activities, enforcing maintenance discipline, validating documentation, and supporting combat-ready sortie generation in high-tempo operational environments.

Technical Skills/Non-Technical Skills

- SQL Database, C, C++,HTML/CSS/Javascript/Typescript/JAVA, RESTful API's Docker, Kubernetes, CI/CD
- Python,Kotlin, Linux, ADA Linux (Ubuntu), VxWorks, RTOS, Pyspark, Grafana, Metrics, TDD,UCD, Prompt
- Validation/Error and Exception Handling Git Configuration Management Digital Signal Processing AI
- Palantir, Data Pipelines, Dashboards Continuous Integration/Continuous Deployment(CI/CD) Web
